

Serotonin is a neurotransmitter in the central nervous system. Serotonin deficiencies are connected with disorders such as depression, schizophrenia, and Parkinson's disease. Moreover, serotonin is produced in excess by carcinoid tumors. Here, the determination of serotonin, together with its metabolite 5-HIAA (see pages 34 - 35), is used to confirm or rule out the tumor. The RECIPE test kit allows for a quick and sensitive determination of serotonin from platelet-rich plasma, platelet-poor plasma, and serum. For the determination from urine an additional test kit is available (see pages 32 - 33).
